PHP: Hypertext Preprocessor PHP is a popular general-purpose scripting language that is especially suited to web development. Fast, flexible and pragmatic, PHP powers everything from your blog to the most popular websites in the world. [Webserver directory index - Wikipedia](#) [Webserver directory index](#). [Jump to navigation](#) [Jump to search](#). This article needs additional ... (e.g. [index.php](#), [index.shtml](#), [index.jsp](#), [default.asp](#)) even though it may be more appropriate to still specify the html output ([index.html.php](#) or [index.html.aspx](#)), as this should not be taken for granted. [Removing index.php from URLs](#) ExpressionEngine 4.3.4 ... The [index.php](#) appears in your URLs because it is the file responsible for processing all requests to the system. ... create a new file named [.htaccess](#) (including the leading dot) in the same folder as your site's main [index.php](#) file. ... just remove the slash preceding [index.php](#) in the [RewriteRule](#) line above, like so:.

[How to Redirect index.html to index.php | CSS-Tricks](#) [DirectoryIndex index.php index.html index.htm](#). in the relevant directory made things work. i.e. [index.php](#) was made the default index ([index.html](#) was still needed for the calendar to function) I understand this is a specific, and old, use case but perhaps this solution may be useful in other situations. [Manual:index.php - MediaWiki](#) [Index.php](#) is the main access point for a [MediaWiki](#) site. The other main access point is [api.php](#) [Manual:api.php](#) which handles requests for the [MediaWiki API](#) [API:Main page](#) . [Actions taken \[ edit \]](#). [Manual:Parameters to index.php - MediaWiki](#) This page is a partial list of the parameters to [index.php](#), the main script of the [MediaWiki](#) software. Most of these arguments are usually given as [GET](#) parameters in the URL, but can also be passed as [POST](#) data. [POST](#) is actually required in some cases, such as the [purge](#) action.

[index.php | Drupal 7.x | Drupal API 7.x](#) [index.php](#) The PHP page that serves all page requests on a [Drupal](#) installation. The routines here dispatch control to the appropriate handler, which then prints the appropriate page. [What is the purpose of index.php? - Quora](#) [Index.php](#) is just a PHP file like others. Its the entry point of any website/application. The Apache server is looking for this file by default. You can change this settings on apache configuration and set any file you want to execute. [Index.php](#) , [Index.html](#) [index.asp](#) , [index.jsp](#) , all the webpages. [Facebook - Log In or Sign Up](#) Create an account or log into Facebook. Connect with friends, family and other people you know. Share photos and videos, send messages and get updates.

[web applications - when to use index.php instead of index ...](#) This means if you place an [index.html](#) and a [index.php](#) in the same folder - and having the configuration above - always the [index.html](#) would be delivered by the server.
